

Monitor and evaluate your ESG performance with LSEG

ESG insights for corporate social responsibility teams

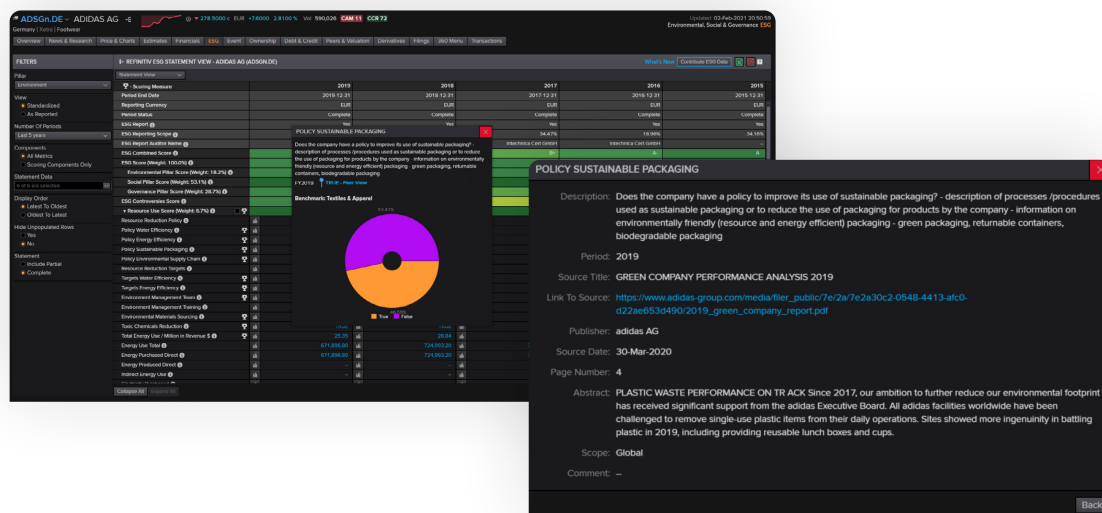

In this new chapter in globalisation, success requires more than just profitability, great products, and top-rated service. As more investors use shareholder activism to influence corporate behaviour, firms' reputations and sustainability practices are playing a larger role than ever in determining their market value and, in turn, their financial performance.

With data focused around climate change, diversity, human rights, license to operate, business ethics, and corporate governance, LSEG's environmental, social, and governance (ESG) data and solutions can help corporations around the globe understand

their ESG impact, as well as how they compare with their peers. This content enables corporations to improve their ESG reporting standards, meet institutional investor mandates, and mitigate reputational risk.

With over 700 research analysts collecting ESG data, LSEG has a robust global ESG content collection with extensive data points for over 95% of global market cap. With local language expertise and multiple geographic operations, we process publicly available information sources with the aim of providing up-to-date, objective, and comprehensive coverage.

Monitor and report your ESG performance

You'll be able to view all ESG measures and scores for your company across a customisable time frame. Our proprietary ESG scores were designed to objectively measure a company's relative ESG performance, based on company-reported data on over 870 metrics and across 10 themes (including emissions, product innovation, human rights, and shareholders). Each measure goes through an extensive process to standardise

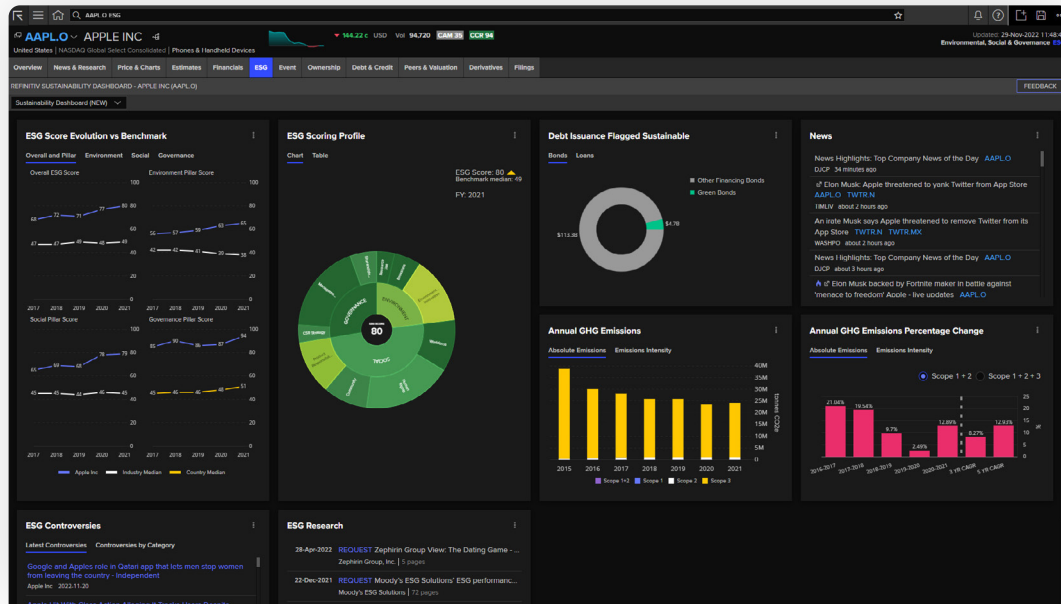

the information, so it is comparable across the entire range of companies.

We also provide an overall score that is discounted for ESG controversies that materially impact the corporation.

You can click through to original data sources to obtain further context for specific data points with peer context and audit functions.

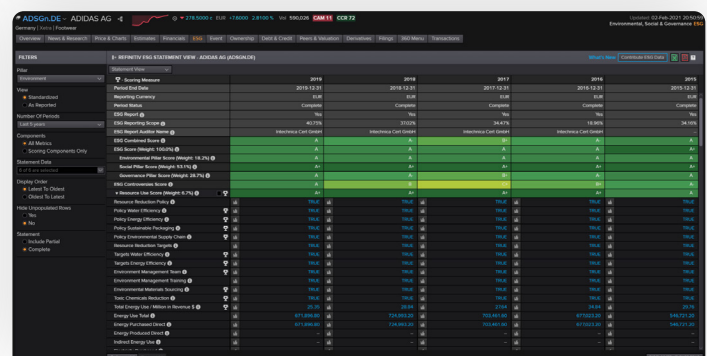

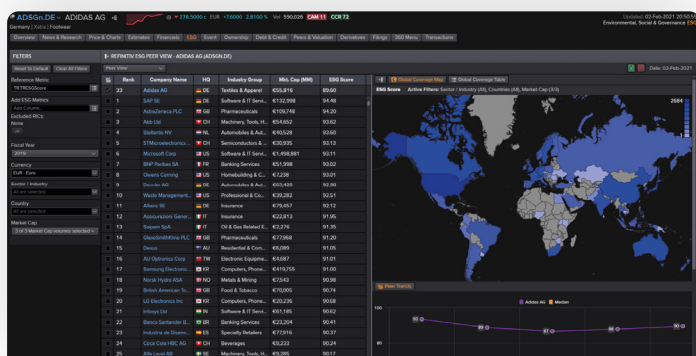

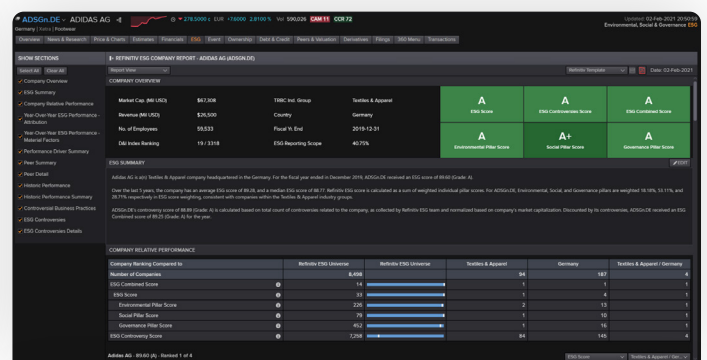

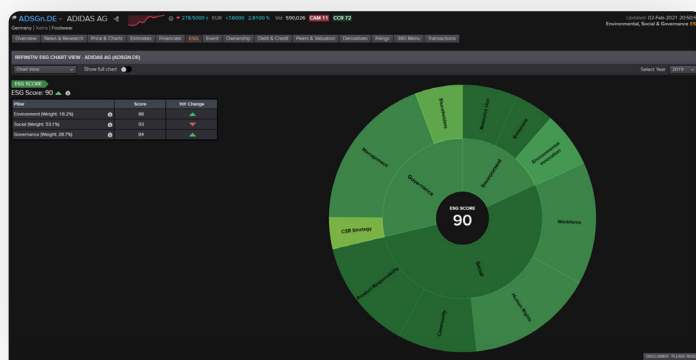

Get a full view of your sustainability performance

The sustainability dashboard gives you access to all the sustainability information you need about your company — including ESG scores, debt issuance, greenhouse gas emissions, ESG controversies, news and research — in one place.

Easily evaluate your ESG performance and compare with industry peers

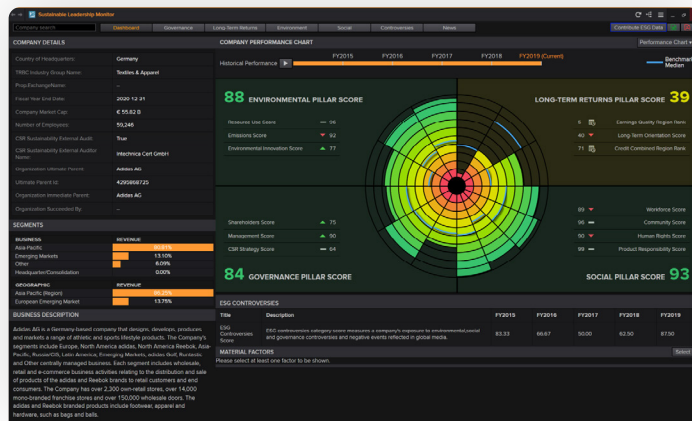

Conduct peer analysis on ESG data points with a variety of views on one interactive page to find the categories that matter to you. This peer analysis function allows you to stay ahead of the competition by easily viewing the strengths and weaknesses of your ESG practices and comparing your scores against industry peers'. The comparisons help you identify your exposure to ESG risks and take the necessary steps to address them before they negatively impact your company. The views also allow you to determine where your team should be disclosing more data — allowing you to provide a deeper view into your company and potentially improve your ESG score.

Measure and report on sustainable leadership

The Sustainable Leadership Monitor in LSEG Workspace or Eikon was created in partnership with the World Economic Forum and allows you to measure and report on sustainable leadership across a deep range of financial and ESG criteria.

In your search for trusted and transparent ESG data to aid your long-term strategy, the Sustainable Leadership Monitor provides analytics for publicly listed companies to measure, compare, visualise, and communicate long-term sustainability progress across ESG and financial criteria, at a macro and company level.

Easily update and publish your firm's ESG data

Review, update, and publish your firm's ESG data within the LSEG ecosystem. LSEG offers one of the most comprehensive ESG databases, giving our clients access to ESG data on over 16,000 public and private companies globally, across more than 870 ESG metrics.

The ESG Contributor Tool helps you manage your firm's ESG data. By using the tool, you make your data available to institutional investment firms, asset managers, investors, corporations, universities, and research firms across our suite of products. LSEG products allow the financial community to easily integrate ESG factors into portfolio analysis, equity research, screening, and quantitative analysis.

The Sustainable Leadership Monitor provides two powerful and intuitive dashboard views. One summarises the performance of a company across four broad, distinct pillars:

- Environment
- Governance
- Social
- Long-term returns

The other provides deep analysis of the ESG scores of a company, outlining:

- Overall ESG score
- Pillar scores
- Category scores
- Metrics

Why LSEG for your ESG research and analysis?

More and more companies are integrating ESG practices into their business and it is becoming more and more challenging to stand out from the competition. With LSEG ESG data, you can take advantage of a comprehensive database with functions that include ESG performance scores, peer analysis, and historical analysis, to ensure that your company becomes a sustainable leader.
