What's new in version 26.13.13.0

For LSEG Workspace add-in version 26.13.13.0, the new features, enhancements, and bug fixes, outlined in the sections below, have been included.

General

Type	Description
Feature	n/a
Fix	<ul style="list-style-type: none"> Resolves an issue when recalculating in manual mode with Deep Calculation off, where formulas would be calculated twice. Resolves an issue when referencing another formula, where the RtContribute function would publish a null value before the correct value was calculated. Resolves an issue where the maximum number of instruments that could be referenced in an RDP.Data function for fundamental data was limited to 7,500. Resolves an issue where the AlignType parameter was not handled correctly in TR/RDP.Data functions Resolves an issue in the RDP.HistoricalPricing function where weekends would be displayed for some RICs when using the DAY:W parameter. The F9 shortcut now calculates only the active workbook, not all open workbooks.

Datastream for Office (DFO)

Type	Description
Feature	<ul style="list-style-type: none"> Ctrl+U has been added to upload DFO User Created Time Series UCTS. The DFO Request Table conversion wizard can now display messages in the interface and logs where there are broken links.
Fix	<ul style="list-style-type: none"> Resolves issues with processing DFO Request Table, where: <ul style="list-style-type: none"> named ranges are used for the input, and Excel formulas are used in the destination cells

Datastream Charting

Type	Description
Feature	<ul style="list-style-type: none"> Added support for running Datastream Chart Reports with macro scripts.
Fix	n/a

Version history

Version 26.11.5.0

Release date: 22.03.2025

General

Type	Description
Feature	<ul style="list-style-type: none"> New data retrieval setting to control whether data remains after removing the formula For real-time formulas, when connectivity to Workspace is lost, an <i>N/A Stale</i> message is displayed DATA_STATUS element for TR, RDP.Data, and RtGet functions that shows the status for real-time subscriptions for each selected instrument
Fix	<ul style="list-style-type: none"> Resolves several RDP function and refresh issues: <ul style="list-style-type: none"> Macro within RDP.Data now executes at the time specified in the ONTIME parameter USN_FI calendar code is now supported in RDP.DateListHolidays formulas After pausing updates and refreshing, the RDP.HistoricalPricing formula now retrieves the latest data RDP.Data Lang parameter now returns text data in specified language Stability and performance improvements when using the Shift+F9 shortcut Resolves issues related to error handling for: <ul style="list-style-type: none"> Nested IF functions Invalid destination cells Resolves data clearing issue when in manual calculation mode Resolves issues in the RtGet function (including date format conversion and manual mode issues) Resolves other issues related to formulas and parameters, where: <ul style="list-style-type: none"> Defining the NBROWS parameter as 1, may occasionally not return data For some identifiers, using the CODE parameter did not return data

Datastream for Office (DFO)

Type	Description
Feature	<ul style="list-style-type: none"> New setting to not replace DFO templates, such as the Request Table or Conversion Wizard, so updated versions can be shared with users In Conversion Wizard, where the Trust Access to VBA Object Model setting in the Trust Center is not enabled, a confirmation box with path settings is displayed. The user can choose to continue, and skip copying VBA modules.
Fix	<p>DSGRID</p> <ul style="list-style-type: none"> Preserves the format on formula refresh, where there is a date in the top left cell of the request Resolves an issue where a formula is retrieving a date and this is used in another DSGRID formula When using the Workbook refresh button with DSGRID formulas and the focus is on an Excel chart sheet, resolves an issue where Excel closes When the NotAvailableString is a number, formulas now return the value in number format, so it can be used in Excel functions <p>Request Table</p> <ul style="list-style-type: none"> Data Destination is now supported in any case Support cell referencing in all table fields Resolve an issue in table execution when Display Destination as an Excel Formula is checked <p>Conversion Wizard</p> <ul style="list-style-type: none"> The Wizard removes a set of named ranges created in Eikon (starting with TRNR), which are no longer required <p>User Created Time Series (UCTS) template</p> <ul style="list-style-type: none"> Resolves an issue where the first values in the template are #N/A The upload parameters are now case insensitive <p>DFO index</p> <ul style="list-style-type: none"> Add option to process Request Tables sequentially, so that they are closed after being updated Resolves an issue where the files are in the same directory and the full path is not specified

Datastream Charting

Type	Description
Feature	Apply a style to exported charts using the Chart Manager
Fix	n/a

Version 25.1.119.0

Release date: 23.11.2024
